

Inspire your students to follow Dina's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Dina Shehata of Holy Heart of Mary High School won the top regional prize in the Atlantic Region for her project "A Low Cost Phantom Model for Point of Care Ultrasound Training."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue scientific research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

"My purpose became not to create a low-cost phantom model, but rather create an affordable instrument of education that could be easily accessible to Al Qanatir Al Khayriyyah and any other place also limited by resources or funds."

DINA SHEHATA
REGIONAL WINNER, ATLANTIC REGION
NATIONAL COMMERCIALIZATION WINNER
