

Inspire your students to follow Iveta's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Iveta Demirova of David Thompson Secondary School won the top regional prize in British Columbia for her project "Exploring the development of antibody-scaffolded membrane-fusion inhibitors for HIV-1 therapy."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

Get the word out.

Print, post, or forward the attached PDF poster about Sanofi Biogenius Canada to let your students know about this exciting opportunity.
