

Inspire your students to follow Lucas's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Lucas Penny of Grimsby Secondary School won the top regional prize in Southwestern Ontario for her project "Salivary microRNAs as a Novel Tool for Microfluidic Detection of Breast Cancer."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

"After a close family friend was diagnosed with breast cancer, I decided to focus my efforts to try and develop a way to diagnose breast cancer in its early stages."
