

Inspire your students to follow Melody's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Melody Song of Evan Hardy Collegiate Institute won the top regional prize in Saskatchewan for her project "Fabalous Markers: Preventing Favism by Selecting Faba Bean Mutants Using Molecular Markers".

The SBC competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

"I was inspired to explore the fields of agriculture and biotechnology and pursue my own research with hopes of solving problems and helping others worldwide."

MELODY SONG
REGIONAL WINNER, SASKATCHEWAN
2ND PLACE NATIONAL WINNER
