

## Inspire your students to follow Miranda's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Miranda Li of Northern Secondary School won the top regional prize in the Greater Toronto Area for her project "License to kill: Characterizing suicide gene systems as safeguards for cell-based therapies."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue scientific research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

*"I did my first science fair project in grade 5, and I really liked the idea of learning more about all these unanswered questions by asking your own questions, and conducting your own study."*

MIRANDA LI  
REGIONAL WINNER, GTA

## Get the word out.

Print, post, or forward the attached PDF poster about Sanofi Biogenius Canada to let your students know about this exciting opportunity.
