

Inspire your students to follow Thomas's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Thomas Ribeiro of Laval Senior Academy won the top regional prize in Quebec for his project "BIO-PLANT - A Novel Photo-Methanotrophic Biofiltration System for the Curbing and Mitigation of Greenhouse Gas Emissions."

The Sanofi Biogenius Canada competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes,

"I see my interest in biotechnical research leading me along a path where a future career as an environmental/ biomedical engineer is definite."

THOMAS RIBEIRO
REGIONAL WINNER, QUEBEC
