

Inspire your students to follow Bowen's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Bowen Xue of Bell High School won the top regional prize in Eastern Ontario for his project "Development of fibrinogen aptamer-gadolinium conjugate for targeted MRI contrast agents."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue scientific research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

Get the word out.

Print, post, or forward the attached PDF poster about Sanofi Biogenius Canada to let your students know about this exciting opportunity.

The goal of this project is to synthesize fibrinogen aptamer conjugates to be used as targeted MRI and CT contrast agents for the diagnosis of stroke and intracranial aneurysms.

BOWEN XUE
REGIONAL WINNER, EASTERN ONTARIO
