

Inspire your students to follow Harkirat's footsteps by entering this year's Sanofi Biogenius Canada

Last year, Harkirat Bhullar of Evan Hardy Collegiate Institute won the top regional prize in Saskatchewan for his project "Deep Learning for Autism Diagnosis: Insights into Genomic and Phenotypic Features".

The SBC competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

A novel computer-aided diagnostic—"deep diagnosis" is developed to address these delays and incorporate genomic information. It can predict autism diagnosis (with a 99.6% accuracy) by combining genomic and phenotypic information.

HARKIRAT BHULLAR
 REGIONAL WINNER, SASKATCHEWAN
