

# Inspire your students to follow Jeremy's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Jeremy Levett of Vanier College won the top regional prize in Quebec for his project "The Translationally Regulating Mechanisms of GCN2 in Pulmonary Veno-Occlusive Disease and Iron Metabolism."

The Sanofi Biogenius Canada competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

*By better understanding the mechanisms through which GCN2 regulates pulmonary veno-occlusive disease, we hope to provide the scientific basis for an eventually lasting treatment to this fatal illness.*

JEREMY LEVETT  
REGIONAL WINNER, QUEBEC

## Get the word out.

Print, post, or forward the attached PDF poster about Sanofi Biogenius Canada to let your students know about this exciting opportunity.
