

Inspire your students to follow Justin's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Justin Lin of St. John's-Ravenscourt School won the top regional prize in Manitoba for his project "Development of an Interfering Peptide-Directed Knockdown of Misfolded SOD1."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

This project investigates two novel techniques with the ultimate goal of making ALS a treatable disease. Firstly, we demonstrate the potential of our modified ELISA as a diagnostic tool. We also show the promise of our CT4 peptide as a cure for ALS.

JUSTIN LIN
REGIONAL WINNER, MANITOBA

Get the word out.

Print, post, or forward the attached PDF poster about Sanofi Biogenius Canada to let your students know about this exciting opportunity.
