

Inspire your students to follow Tasnia's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Tasnia Nabil of Vincent Massey Secondary School won the top regional prize in Southwestern Ontario for her project "A Novel Computational Approach to Advance Ferromagnetic NanoTherapy as a Therapeutic Solution for Cancer."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

A novel computational tool was created to advance Ferromagnetic NanoTherapy into routine clinical applications by determining the necessary parameters for an optimal therapy and provide a visualization of the nanoparticle heat generation in the body.

TASNIA NABIL
REGIONAL WINNER
SOUTHWESTERN ONTARIO
1ST PLACE NATIONAL WINNER
