

## Inspire your students to follow Varun's footsteps by entering this year's Sanofi Biogenius Canada competition.

Last year, Varun Kundra of Webber Academy won the top regional prize in Alberta for his project "A novel electrode-based biosensor for the detection and diagnosis of CNS injuries."

The Sanofi Biogenius Canada (SBC) competition gives high school students across Canada the chance to pursue biotechnology research under the guidance of real scientists in real labs. Students choose a project that's meaningful to them, explore the practical applications of potential innovations -- and sometimes, in the process, help change the world.

Students will have the chance to compete with other high school students from their region and across Canada -- and if they're a finalist -- from around the world. Plus, the SBC competition gives youth the chance to win cash prizes, scholarships, and more!

*The non-invasive and portable CNS injury biosensor will allow diagnosis by a finger-prick blood test in less than 30 minutes and is selective to S100B. This device costs less than \$10 per test and could aid in the prognosis of CNS injuries.*

VARUN KUNDR  
REGIONAL WINNER, ALBERTA

## Get the word out.

Print, post, or forward the attached PDF poster about Sanofi Biogenius Canada to let your students know about this exciting opportunity.
